

Guide adapted dataset:

Adapted the column names for German dataset:

Old Collums	New Columns
OID	OID
ID	c_id
ULAND	c_Federal_State
UREGBEZ	c_Administraive_region
UKREIS	c_Administrative_destrict
UGEMEINDE	c_Municipalitty
UJAHR	year
UMONAT	month
USTUNDE	hour
UWOCHENTAG	day_of_week
UKATEGORIE	casualty_severity
UART	kind_of_accident
UTYP1	type_of_accident
ULICHTVERH	Light_condiitons
IstRad	Road_surface_conditions
IstPKW	is_cyle
IstFuss	is_car
IstKrad	is_pedestrian
IstGkfz	is_mcycle
IstSonstige	is_goodsv
USTRZUSTAND	is_other
LINREFX	loc_eastings-X
LINREFX	loc_northings-Y
XGCSWGS84	longitude
YGCSWGS84	latitude
PLST	PLST
!New!	urban_or_rural_area

Column urban_or_rural_area like in the uk dataset. Defines collisions in „Gemeinden“ (communities) with more than 10000 citizen as urban (<https://roadtraffic.dft.gov.uk/about>) using the information from(<https://gdz.bkg.bund.de/index.php/default/verwaltungsgebiete-1-250-000-mit-einwohnerzahlen-stand-31-12-vg250-ew-31-12.html>)

Made columns of UK dataset more equal to the columns of German dataset (filename: reduced_uk_dataset.csv):

Column Name:	Description:
collision_index	taken from dataset
collision_year	taken from dataset
collision_ref_no	taken from dataset
location_easting_osgr	taken from dataset
location_northin_osgr	taken from dataset
longitude	taken from dataset
latitude	taken from dataset
casualty_severity	Like German dataset
day_of_week	taken from dataset
time	taken from dataset
local_authority_district	taken from dataset
local_authority_ons_district	taken from dataset
first_road_class	taken from dataset
light_conditions	1 to 0 (daylight), 4,5,6,7 to 2 (darkness), else - 1 (no „Dämmerung“ in UK data)
weather_conditions	taken from dataset
road_surface_conditions	from 0 to 1 (dry), 2,5,6,7 to 1 (wet/mud), 3,4 to 2 (snow/ice)
urban_or_rural_area	taken from dataset
vehicle_manoeuvre	taken from dataset
vehicle_direction_from	taken from dataset
vehicle_direction_to	taken from dataset
hit_object_in_carriageway	taken from dataset
vehicle_leaving_carriageway	taken from dataset
hit_object_off_carriageway	taken from dataset
is_car	Collisions with cars vehicle_types from the vehicle dataset where vehicle_type is 8,9,10,19
is_cyle	Collisions with pedal cycles from the vehicle dataset where vehicle_type is 1
is_mcyle	Collisions with every type of Motorcycles vehicle_types from the vehicle dataset where vehicle_type is 2,3,4,5,23,97
is_goods_v	Collisions with goods vehicles vehicle_types from the vehicle dataset where vehicle_type is 11,20,21,98

is_other	Collisions with other vehicle_types from the vehicle dataset
is_pedestrian	Collisions where pedestrians were envolved, all collisions, where pedestrian_location is not 0
month	Split date column
day	Split date column

Made columns of UK dataset more eqal to the columns of German dataset including kind_of_accident and type_of_accident (filename: reduced_uk_dataset_with_kind_and_type.csv):
